SHRUBS and EVERGREENS

IMPORTANT!

Watch closely the foliage of Azaleas and Rhododendrons during summer and early autumn. If the leaves take on a sort of brownish yellow cast, the Lace Fly is most likely at work. This pest is about half the size of a Pea Aphis, and will be found eating from underneath the leaves. They multiply very rapidly, and in a very short time will completely destroy the foliage.

This pest can be controlled effectively and quickly with Black Leaf 40, combined with a liberal quantity of soap flakes well mixed with the solution.

It is very essential to spray thoroughly the under-side of the leaves.

The Answer

HOW TO BEAUTIFY YOUR SHRUBBERY

Simple, easy and effective spraying

Spray all your shrubs and shade trees which drop their foliage in winter, with Scalecide 1 to 15.

Scalecide kills scale and other pests which ruin your rose bushes, lilacs and shade trees. Scalecide builds up the vigor and vitality of your trees and shrubs, making them more beautiful and more resistant to winter cold and summer drought. On evergreens, for scale, spruce gall, bud moth, etc., use Scalecide 1 to 20 or 25 just before the new growth starts in the late Spring. Spray with Scalecide and be sure!

MAKE YOUR FRUIT TREES PRODUCTIVE

Here's an easy way

Spray all fruit trees, grape vines, berry bushes, etc. with Scalecide 1 to 15. Spray any time the temperature is warmer than 40 degrees, after the foliage is off in the Fall until the green tips of the buds actually begin to show in the Spring.

Scalecide Invigorates as it Protects!

Scalecide controls aphis, red mite and many other pests of apples, peaches, pears, etc. Scalecide kills many over-wintering codling moth larvae, and aids in cleaning up cankers. The year after year use of Scalecide invigorates the trees. Scalecide is guaranteed to make a better orchard than lime-sulphur or your money back. No other spray does all this. Scalecide costs less because it does more. Let Scalecide be your dormant spray. Qt. can 75c; gal. \$1.75; 5 gals. \$6.35; 10 gals. \$10.90. F.O.B. Baltimore.

SEED POTATOES

Maine-Grown

CULTURE—Potatoes do particularly well on sod ground or pasture land, where the turf has been freshly turned. Tubers are usually cut into two-eyed pieces; plant in April in furrows of good depth about 3 feet apart. Cover with 4 inches of soil, and cultivate frequently after the plants are up. Plant late crop July 1st to August 1st. Eight to 10 bushels will plant an acre.

We can supply the two new varieties of Potatoes: Chippewa for early, and Katahdin for later. Both varieties have unusual merits, and were originated by U. S. Dept. of Agriculture. Write for prices.

We are not quoting prices in our catalog. When ready to plant, write us, and we will then quote you the very lowest prices consistent with the quality of our seed stock.

Griffith & Turner's*

RICHGREEN LAWN GRASS SEED

Yearly comparative trials have proved this strain to be unsurpassed for first-class, permanent lawns. Only the finest varieties of suitable grasses are used and the seed is recleaned until it is free from chaff and weed seeds.

This seed will produce a green, smooth, deep-rooted, velvety sod with a thick bottom, free from the common grasses which produce clumps and knots on the lawn. It is used extensively on the finest estates to produce those exquisitely smooth, rich green sweeps of lawn which are so much admired. Lb. 35c; 3 lbs. \$1; 5 lbs. \$1.50; 20 lbs. \$5.75; 100 lbs. \$27. Delivered free in United States by parcel post, freight, or express, our option.

SUPERFINE LAWN SEED

This is a correct combination of triple refined imported and domestic grasses, including a liberal proportion of Bent Grass, producing a rich green turf. **Superfine** is undoubtedly the finest Lawn Seed available in this country or abroad. One pound will sow an area of 200 square feet. Lb. 45c; 5 lbs. \$2; 20 lbs. \$7.50; 100 lbs. \$35.

SHADY PLACE LAWN GRASS MIXTURE

Will quickly produce an abundant and even growth of beautiful green grass in shade, and as it blends well with our Richgreen Lawn Grass Seed it may be used on those portions of the lawn which are shaded by trees, buildings, etc., thus covering the whole area with a rich green sward. Lb. 50c; 3 lbs. \$1.35; 5 lbs. \$2; 20 lbs. \$7.50; 100 lbs. \$35. Delivered free in United States.

LAWN SEED

SANDY SOIL LAWN GRASS

A carefully blended mixture of fine-bladed grasses that will produce a permanent and beautiful lawn on the lightest and most sandy soils. Seed one pound to 200 square feet. Lb. 50c; 3 lbs. \$1.35; 5 lbs. \$2; 100 lbs. \$35. Delivered free in United States.

PERMANENT TERRACE AND SLOPE MIXTURE

This mixture has been carefully blended so as to contain various grasses of rapid, dense, even growth and strong root systems, which will insure a permanent, beautiful slope. Lb. 55c; 3 lbs. \$1.50; 5 lbs. \$2.25; 100 lbs. \$38. Delivered free in United States.

VELVET GREEN LAWN GRASS

This is a high-quality Grass Seed that will produce a beautiful lawn. Lb. 30c; 3 lbs. 80c; 5 lbs. \$1.25; 20 lbs. \$4.50; 100 lbs. \$20.

WHITE DUTCH CLOVER

The best Clover for lawns. 1/2 lb. 55c; 1 lb. \$1.00, F.O.B. Baltimore.

LAWN GRASSES should be used at the rate of one pound to 200 square feet, 100 lbs. per acre. Very much better results can be had from lawn seeding if it is done early in the Spring just as soon as the soil can be conditioned, so as to allow ample time for development of a healthy root growth that will survive summer heat. **DO NOT** expect to have a good lawn on poor worn out soil. You must use lawn food.
